

ONLY SUBMIT YOUR SAS PROGRAM

Write a SAS program called Q3.sas to read the SAS data set q3data.

In your SAS program using one data step, create two permanent SAS data sets called q3black and q3hispanic.

q3black data set will have race variable RIDRETH1 = 4 group only and the other variables and

q3hispanic will have race variable RIDRETH1= 1 only and the other variables.

Using the q3black SAS data set, print all variables, except the race variable with the title Black Race/Ethnicity.

Using the q3hispanic SAS data set, print all the variables except the race variable with the title Hispanic Race/Ethnicity.
